# SDG6000X Series Pulse/Arbitrary Waveform Generator

tienda.logicbus.com.mx logicbus.com ventas@logicbus.com sales@logicbus.com

México +52 (33)-3854-5975 USA +1 (619) 619-7350 **SDG6052X** 

**SDG6032X** 

**SDG6022X** 

### **Overview**

SIGLENT'S SDG6000X is a series of dual-channel Pulse/ Arbitrary Waveform Generators that feature up to 500 MHz bandwidth, a maximum sample rate of 2.4 GSa/s and 16-bit vertical resolution. They also include proprietary TrueArb & EasyPulse technology that help to solve the weaknesses inherent in traditional DDS generators when generating arbitrary, square and pulse waveforms. In addition, the SDG6000X is a multi-function device which can generate Noise, IQ signals and PRBS patterns. These features enable the SDG6000X to provide a variety of high fidelity and low jitter signals, meeting the growing requirements of complex and intensive applications.

### **Key Features**

- Dual-Channel, 500 MHz maximum bandwidth, 20 Vpp maximum output amplitude, high fidelity output with 80 dB dynamic range
- High-performance sampling system with 2.4 GSa/s sampling rate and 16-bit vertical resolution
- Multi-function signal generator, meeting requirements in wide range

- Sweep and Burst function
- Harmonics function
- Maveform Combining function
- 196 built-in arbitrary waveforms
- Standard interfaces include: USB Host, USB Device (USBTMC) , LAN (VXI-11, Socket, Telnet) . Optional Interface: GPIB
- 4.3" touch screen display for easier operation

### Characteristics

#### Continuous Wave

Up to 500MHz continuous sine wave.

Pulse

#### Adjustable Pulse Width

The pulse width can be fine-tuned to the minimum of 3.3ns with an adjustment step as small as 100 ps, at any frequency.

Adjustable Edge

The rise/fall times can be set independently to the minimum of 1ns at any frequency with a minimum adjustment step as small as 100  $\,\rm ps.$ 

#### Low Jitter

When a Square/Pulse waveform is generated by traditional DDS, there can be additional jitter if the sampling rate is not an integerrelated multiple of the output frequency. EasyPulse technology successfully overcomes this weakness in DDS designs and helps to produce low jitter Square/Pulse waveforms.

#### Arbitrary Waveform

Traditional DDS designs can lead to additional jitter and distortion when sourcing arbitrary waveforms. The SIGLENT TrueArb design minimizes jitter and distortion to help deliver high fidelity arbitrary waveforms.

#### Point by Point Output

TrueArb generates arbitrary waveforms point-by-point. It never skips any point so that it can reconstruct all the details of the waveform, as defined. Two interpolation modes are available: linear and zero-order hold.

#### Low Jitter

As with EasyPulse, TrueArb effectively overcomes the clock jitter that can effect traditional DDS generators.

#### Arbitrary Waveform Software EasyWaveX

EasyWaveX is an arbitrary waveform software platform that supports waveform creation and editing. It features manual drawing, as-wellas line, equation, and coordinate editing modes. It is also a convenient way for users to edit their own arbitrary waveforms.

#### Noise

Gaussian noise with bandwidth up to 500 MHz. The repetition period is more than 100 years, and the bandwidth is adjustable.

Wideband Gaussian noise can be easily added to other waveforms to simulate real-world scenarios in which the signal contains a large degree of noise.

### IQ (optional)

The SDG6000X supports popular modulation types such as ASK, FSK, PSK, and QAM. Proprietary resampling technology provides excellent EVM performance at arbitrary symbol rates between 250 Symb/s  $\sim$  37.5 MSymb/s. Built-in digital quadrature modulator provides the possibility to generate IQ signals from baseband to 500 MHz intermediate frequency.

IQ waveforms can be generated by the PC software EasyIQ.

#### PRBS

PRBS3  $\sim$  PRBS32 with finely adjustable  $10^{\text{-6}}$  bps  $\sim$  300 Mbps bit rate and 1 ns  $\sim$  1us edge.

| *CH1:PF  | RBS.ON.50       | Ω   | CH2:PRBS.ON.50Ω  |  |                    |  |
|----------|-----------------|-----|--|--|--------------------|--|
|          |                 |     | Bit Rate<br>Amplitude<br>Offset<br>Length<br>Rise/Fall | 122.880<br>800.0m<br>850.0m<br>PRBS-3<br>2.0ns | Vdc                |  |

| TTL/CMOS | LVTTL<br>LVCOMS | ECL | LVPECL   | LVDS   | Differential<br>ON |  |

Preset common logic levels such as TTL, LVCMOS, LVPECL and LVDS. An added differential mode provides an easy way to generate differential signals using the both channels.

### High Fidelity Output with 80dB Dynamic Range

Large Signals at High Frequencies Dual-channel, 20 Vpp amplitude sine wave guaranteed at up to 40 MHz.

**Small Signals** Low noise floor, improves signal-to-noise ratio.

#### Complex Signals Generation

#### Modulation

Plenty of modulation types, such as AM, FM, PM, FSK, ASK, PSK, DSB-AM, PWM are supported. The modulation source can be configured as "Internal" or "External".

#### Sweep and Burst

Sweep modes include "Linear" and "Log". Burst modes includes "N cycle" and "Gated". Both Sweep and Burst can be triggered by "Internal", "External" or "Manual" source.

#### Waveform Combining

The waveform combining function superimposes CH1 and CH2 waveforms internally and provides the combined waveform to a user-selected output. Easily combine basic waveforms, random noise, modulation signals, sweep signals, burst signals, EasyPulse waveforms and TrueArb waveforms

#### **Harmonics Function**

Harmonics function gives you the ability to add higher-order elements to your signal.

| *CH1:Sine.ON.50Ω       | CH2:Sine.ON.50Ω          |                  |

| Type Order Harmon      | C Harmonic Return        |                  |

#### Iwo Dual-channel Operation Mode

"Phase-Locked" mode automatically aligns the phases of each output. While "Independent" mode permit the two channels to be used as two independent generators. Independent mode also smoothes parameter (frequency, amplitude) changes made to an active channel.

#### Frequency Counter

| Counter:ON               |      |            |             |                   |           |       |  |

8-digit hardware frequency counter with statistics function and input range of 0.1 Hz  $\sim$  400 MHz.

### Specifications

All specifications apply to both channels. Unless otherwise stated, all specifications are not guaranteed unless the following conditions are met:

- The generator is within the valid calibration period
- The generator has been working continuously for at least 30 minutes at a specified temperature (18  $^\circ$ C  $\sim$  28  $^\circ$ C )

| Frequency                   |      |      |      |      |                  |  |  |

SDG6000X Pulse/Arbitrary Waveform Generator

#### **Ordering Information**

| Product Description        |                                  |
|----------------------------|----------------------------------|
| SDG6052X                   | 500 MHz, 2-CH, 2.4 GSa/s, 16-bit |
| SDG6032X                   | 350 MHz, 2-CH, 2.4 GSa/s, 16-bit |
| SDG6022X                   | 200 MHz, 2-CH, 2.4 GSa/s, 16-bit |
| Standard Configurations    |                                  |
| Quick start ×1             |                                  |
| Power cord ×1              |                                  |
| Calibration certificate ×1 |                                  |
| USB cable ×1               |                                  |
| BNC coaxial cable x2       |                                  |
| Optional Configurations    |                                  |
| SPA1010                    | 10W Power Amplifier              |
| ATT-20dB                   | 20 dB Attenuator                 |
| USB-GPIB                   | USB-GPIB Adapter                 |
| SDG-RMK                    | Single Instrument Rack Mount Kit |
| SDG-6000X-IQ               | IQ Signal Generator Function     |

## SDG6000X Series Pulse/Arbitrary Waveform Generator

#### About SIGLENT

SIGLENT is an international high-tech company, concentrating on R&D, sales, production and services of electronic test & measurement instruments.

SIGLENT first began developing digital oscilloscopes independently in 2002. After more than a decade of continuous development, SIGLENT has extended its product line to include digital oscilloscopes, function/arbitrary waveform generators, RF generators, digital multimeters, DC power supplies, spectrum analyzers, vector network analyzers, isolated handheld oscilloscopes, electronic load and other general purpose test instrumentation. Since its first oscilloscope, the ADS7000 series, was launched in 2005, SIGLENT has become the fastest growing manufacturer of digital oscilloscopes. We firmly believe that today SIGLENT is the best value in electronic test & measurement.
