## Design Features

### High-resolution and high-precision output

The SPD1000X power supply features a high measurement resolution of 1mV/1mA. This ensures accurate output even with very small changes in voltage or current. This is impossible for a low resolution power supply.

### 4-wire SENSE compensation mode function

In the 4-wire SENSE compensation output mode: By using a separate measurement circuit, the supply can more accurately compensate for any voltage drops due to high resistance connections or long cables. Maximum compensation voltage is 1V.

### Low ripple and noise

### Fast transient response time

### Low voltage overshoot

### 0.01% Load Regulation & 0.2% Line Regulation

### Panel displays the timing output

Real time wave display
